## **RES-Q Reaches 300 Hospitals Enrolled**

November 22, 2017

With the recent introduction of the RES-Q Registry to Spain, RES-Q has reached an important milestone with 300 hospitals enrolled in the project. RES-Q began as a project of ESO-EAST, and has continued as part of the ESO Stroke Quality Improvement Programme. Since its initial pilot phase at this time last year (November 2016), RES-Q has grown rapidly thanks to the enthusiasm of its participants, and from strong collaboration amongst partners. RES-Q is endorsed by both ESO and the WSO; it collaborates with national stroke societies throughout Europe, as well as with stroke societies in Asia, Africa, and the Middle East; and has had incredible support from the Angels Initiative. We appreciate everyone's ongoing support and participation, and look forward to seeing numerous results presentations at ESOC 2018 in Gothenburg.
